protectors during all this time, more than game situation, writes:

established in deer parks that one buck to four does will in no way endanger the maintenance of the fierd, it is thus being killed off is an object lesson to what would happen if protection is decreased numbers of these animals.

During the last year the secret service work of the game protestors has given added confirmation of the fact that the proportion of bucks to does is thoroughly satisfactory on biological grounds.

The secret service work, as it applies to game protection. I have already discussed in THE SUN, and it was pointed out that in camps that operated upon the plan of killing practically everything that they saw the sex of 101 deer reported killed was forty-six bucks, forty-four does and eleven fawns.

These were deer that came, in most in far some birds, and he tells me that several that several the same birds, and he tells me that several the same birds, and he tells me that several the same birds, and he tells me that several the same birds, and he tells me that several the same birds, and he tells me that several that several the same birds, and he tells me that several the same birds, and he tells me that several the same birds, and he tells me that several the same birds, and he tells me that several the same birds, and he tells me that I came the same birds and a liberated bird that does not know how to protect him set.

fact that the hunters at those camps shot protected be probably would have

tried by district, shows that the anproximate number of deer in the State is 50.000. With 37.000 men hunting 50.000 deer, under a law which would permit the killing of either sex, the only question that could arise would be that of the number of seasons that could elapse before the last deer would be gone.

Who has spent considerable money in the taken in penalty. Breeding ring necked pheasants, is strongly opposed to the law to protect the female bird being rescinded, and he having the lead up to the declarer, remarks, "Well, partner, we have three thirds in, and I guess we had better sould elapse before the last deer would be gone.

"It can see the excellent work of a second of the hen birds."

W. H. W. says: In stud, the dealer gives himself a sixth card by mistake. Can be put it back?

He certainly cannot keep it, and as it is face up, and all see the error, he must bury it in the pack, and show for the pool with his legitimate five cards, four face up and one buried.

PROBLEMS FOR SUN READERS.

Bridge problem No. 518 was a little more difficult than the usual take all proposition. Here is the distribution:

Clubs are trumps and Z leads. Y and Z want all the tricks.
The solution is for Z to lead the six of clubs. A discards a diamond and Y wins. Y leads the king of diamonds, which B must cover, or Z gets a spade discard. Z trumps the diamond and leads the top trump. A has three discards

If A diseards the spade, Y diseards the small diamond and Z leads the spade, This allows Y to make two tricks, upon

make a diamond and two hearts, as Y cannot get in to lead hearts through a second time.

B having no reason to ruff the second club if he does not know his partner has no more hearts A will with both rounds and lead the diamond. That is three tricks. Now A and B must make two hearts, no matter what B leads so that it is not a diamond.

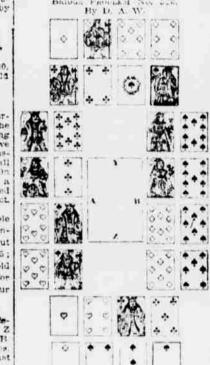

It is obvious that if A discords a heart the problem is solved at once, as Y makes all three cards in that suit. Cangles Turtle of Brooklyn. "Coe Tee." having won the first prize, any suction. So that it is obvious that if A discords a heart the problem is solved at once, as Y makes all three cards in that suit. Cangles Turtle of Brooklyn. "Coe Tee." having won the first prize, any suction text book now on the market. Cangled by the E. P. Builton Company, the race remains between B. T. Blair. Candidate and W. F. W. fo ribe runners. tricks. Now A and B must make two hearts, no matter what B leads so that it is not a diamond.

To return to the bidding. When Y refuses to assist the spades Z's only excuse for going on is his henor score why A should stop bidding or B should fail to go to four clubs is not clear. The hand is a laydown for four odd in clubs, but not five, as Y can ruff the third spade or save his queen.

As it stands Z loses 100 and scores \$1 in henors, net loss 12 only. At clubs A and B can score 42. But for B's play in trumping his partner's ace Z would have been 31 to the good by being set enty one trick and A-B would have lost 73 points by not going on with the clubs.

One curious feature about this hand is that if Z does not overtake his partner's iten of spades when the hand is played at clubs A will make a little slam. Whatever Y might lead next A would wie, pull the trumps and get a spade diseard on the third diamond, established by leading twice through Y by ruffing hearts, if Y led a heart.

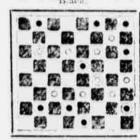

Bendes Females New 2-6.

Checker Endings

Here is something rather unusual. a checker problem composed by a woman.

Clubs are trumps and Z leads. Y and

White to play and win.
